

# Instructions for Using Your Telescoping Legs

Your telescoping legs will arrive to you in the “collapsed” position with the inner “bottom” section completely inside the outer “top” section – see photo above.

To begin, grasp the top section firmly and shake downwards to slide the bottom section out slightly.

1. Note that there is a hole near the top of the outer section well above the long row of holes. Pull the inner section out about 6 inches and rotate until the snap button at the top of the inner section finds that hole and clicks into place.

2. If you are using your legs for a TrimLine canopy or a Mesh Panel Booth Frame you may slide your StaBar Ell or StaBar 3 way fittings onto the leg bottom before attaching the foot.

3. Slide a foot onto each leg and rotate until the snap button in the leg clicks into the snap button hole in the foot.

4. The telescoping leg is designed so that in the “collapsed” position you may keep the foot and/or the StaBar fittings on the leg when transporting them.

5. To extend the leg for use it's handy to use your toe to hold the foot plate down while lifting the outer section. Lift up until a snap button pops out from the inner section.

6. You may then rest the upper section on this snap button while you rotate the inner section until another snap button clicks into the topmost hole in the long row of holes. This is the extended position. From there you may simply extend the leg one hole at a time to reach the desired height or to account for uneven terrain in outdoor uses.

7. To collapse the leg simultaneously push in the “rest” snap button and the snap button in the long row of holes, and slightly rotate the inner section so the snap button does not catch in each hole on the way down.

## Extending Your TrimLine Canopy to 8 ft. or 9 ft. Wall Height

To extend the height of your TrimLine you will receive Upper Leg Extension poles, 15" for 8 ft. tall TrimLines or 27" for 9 ft. tall TrimLines.

TrimLine Telescoping Leg with 8 ft. Extender pole (measures 15")

The extender pole will snap onto the top part of your telescoping leg.

For convenience in setup you may wish to attach the extender pole sections to the corner joints of your TrimLine when setting the canopy frame up and before attaching the telescoping legs to the frame.

This is best done after assembling the rafter poles on the TrimLine frame and before putting the canopy top in place. See pages 5 and 6 of your TrimLine setup instructions for reference.

For a 9 ft. tall TrimLine, the extender poles measure 27"
